# ⁛ pixl.page

## Your NFT profile page

With pixl.page, NFT collectors finally get the opportunity to decide how they represent themselves and their collections. By letting you create personalized pages with your NFTs, pixl.page will give you total freedom about what you want to show others without revealing the entire contents of your wallets!

pixl.page will become the ultimate tool for you to design your digital profile around NFTs and Web3, allowing you to freely customize your pixl.pages using NFTs and by leveraging the power of pixl.canvas and pixl.elements.

Imagine a website, connected to your wallets, showing all your favorite NFTs, and you can design the background, freely arrange every NFT the way you want and add countless design elements and plug-ins to really make the page your own.

Our earliest supporters will have the chance to get access to exclusive pixl.elements and receive personalized profile.links to access their pages (e.g. pixl.page/yourname). Even more, they will be able to claim their share of our utility token $PICO for FREE, usable to unlock pixl.elements and tradeable on exchanges.

With pixl.social, we will give the community the opportunity to communicate and interact with other pages and their owners, giving you a platform to express your individuality and share everybody's common passion – NFTs and digital art!
